

Weed Control

Weeds are plants growing where they are not wanted or simply, plants growing out of place. A major reason weeds are controlled in turf is they distract from the overall appearance of the turf. Many weeds can be beneficial to your lawn but if they take away from the uniformity most people don't want them.

Rainbow attacks weeds using an Integrated Pest Management strategy. We look at all of the factors that determine what weeds are growing on your property and then decide on the best way to manage them. The environment is very important to us, so we try to come up with a plan that will cause the least impact and still give you the results that you are looking for. This may require the use of pre and post emergent herbicide, but we always try to limit the amount of chemicals that we use.

The best way to control weeds is by preventing them.

- Water deeply and infrequently which promotes deeper root growth and a healthier lawn
- Mow at 3" or higher so that weed don't get sunlight because your grass shades them
- Fertilize at regular intervals to help thicken your lawn
- Overseed to help fill in thin or bare areas that may be welcoming to weeds
- Aerate in the fall to promote a healthy lawn
- Topdress with Prescription Organic Matter to increase soil health

Every property is different and Rainbow LawnCare will consult with you and implement a plan that fits your expectations. We look at weed control as a partnership and with your help we can deliver the lawn that you desire.

*****The best defense against weeds is a healthy lawn*****
